EDUCATION

Concordia University | Bachelor of Computer Science Expected Dec 2027
Montréal, QC | Sep 2023 - Present

TECHNICAL SKILLS

Programming: Python, Java, C, JavaScript, TypeScript, SQL; HTML/CSS
Development: Node.js, Express, React, MySQL, SQLite, REST APIs, Twilio API, Git, Linux (basic)
Data & ML: Python data processing, CSV, descriptive analytics, logistic regression, model evaluation, Excel

PROFESSIONAL EXPERIENCE

Software & IT Assistant | Lava Group Feb 2023 - Jul 2023
Amman, Jordan

- Developed a full-stack repair tracking system with Node.js, Express and MySQL, centralizing repair stages, technician updates, estimated completion dates and customer pickup status.
- Integrated Twilio SMS notifications triggered by repair completion; reduced manual customer follow-ups by over 40%.
- Supported inventory and accounting systems through troubleshooting, database maintenance and spreadsheet-based workflow automation.

TECHNICAL PROJECTS

Adaptive French | Python, Data Analytics, Machine Learning | GitHub repository 2026

- Built a modular Python CLI that records each vocabulary attempt to timestamped CSV logs, tracking answer correctness and response time for later analysis.
- Designed a spaced-repetition scheduler that prioritizes overdue words and adjusts review intervals based on previous accuracy and recall speed.
- Developed per-word analytics for historical accuracy, average response time and upcoming reviews, with exportable CSV reports.
- Implemented an optional logistic-regression recall predictor using five history-based features, L2 regularization and chronological train/test evaluation against a baseline.

ConUHacks 9 | Route Optimization & Graph Algorithms | Java

- Modeled a road network as a weighted graph and applied Dijkstra's algorithm to calculate shortest routes based on distance and time preferences.
- Incorporated the LARAC constrained shortest-path algorithm to evaluate routes under additional safety considerations.

LEADERSHIP & ENTREPRENEURSHIP

Co-Founder & CEO | Unravel Mar 2025 - Oct 2025

- Co-founded an early-stage behavioral-design platform; led a three-person team through product definition, development planning and early prototyping.
- Participated in Concordia's District 3 Validation Program, using structured user discovery to evaluate problem-solution fit.

LANGUAGES & INTERESTS

Languages: English, Arabic; French (currently learning)
Interests: Financial technology, data science, Brazilian Jiu-Jitsu (BJJ competitor)
